Referring to claim 13, the prior art does not teach or reasonably suggest a loadable kernel module that pre-sets up at least a specific system call defined by a user in the kernel space of the source computer system, generates a corresponding file modification message, according to the type of the system call, to notify the kernel when a file modification event conforming to the specific system call occurs in the user space of the source computer system, wherein the loadable kernel module comprises a replacement unit for replacing an original system call in the source computer system with the specific system call.

Referring to claim 16, the prior art does not teach or reasonably suggest implementing a specific system call defined by a user that is pre-loaded by a loadable kernel module in the kernel space of the source computer system, to notify a kernel of the source computer system of a file modification event when the file modification event
